

# Results Based Programme Planning using the ProLL Model

CeDRE International  
Training Program

## Program Overview

The R&D team at CeDRE carries out practical situational analysis of work environment situations in the public sector on all areas of concern in public policy and management. This is supported by the CeDRE team's cumulative decades of real-life experience working in the public sector both in Malaysia and in developing countries around the world.

The ProLL Model is a specially designed program logic approach used to guide the logical design and development of focused programmes and projects. First developed in 1992, it has since become a prescribed logical approach for the public sector in Malaysia and several other countries.

THE ProLL Model offers a unique but practical approach accompanied by a host of tools and templates that which help improve public sector management.

## Learning Outcomes

This course is designed to help produce the following preliminary outcomes

- Improved programme performance planning and management in organisations
- Improved ability to systematically identify and formulate key elements of a programme using programme logic
- Improved ability to understand and use the ProLL Model to prepare a results-based performance plan
- Improved ability to prepare a logically sound and defensible programme design that lends itself to efficient and effective monitoring and evaluation
- Improved programme monitoring and evaluation through logical planning and fit for M&E
- Improved risk management for results failures due to inadequate or unsound program logic
- Improved ability to understand and use outcome hierarchy analysis and critical success factors
- Improved ability to understand and apply performance boundaries and boundary partners management
- Improved ability to use a range of programme logic related tools for programme formulation, implementation, M&E, and results management.

## Course Outline

### Part 1

- ◆ Introduction to Program Logic and program theory
- ◆ Fundamentals of program logic in public sector management

### Part 2

- ◆ Designing a basic program logic model using the ProLL Model
- ◆ Understanding the demand analysis under ProLL

### Part 3

- ◆ Formulating the programme's purpose in life (PiL) Understanding multi-dimensional results frameworks and how to identify and design an integrated results-ladder

### Part 4

Results-based delivery strategies and tools and integration of budget and personnel dimensions into the programme design while understanding multi outcomes and impacts

### Part 5

- ◆ Understanding programme boundaries and working with boundary partners Using the ProLL for monitoring and evaluations

## Who Should Attend

- ◆ Performance managers
- ◆ Finance managers
- ◆ Programme managers
- ◆ Performance auditors
- ◆ Senior managers
- ◆ Programme/Department heads
- ◆ Quality management personnel
- ◆ Programme evaluators / Performance auditors

### FEES

USD 1,700 per person

### DATES

6 - 10 April, 10 - 14 August,  
7 - 10 December 2026

### VENUE

In person classroom  
sessions

### METHODOLOGY

- ◆ Action learning program
- ◆ Substantive participatory sharing/learning
- ◆ Case studies
- ◆ Hands-on development, design and application work.
